Key solutions

ASCO Angle-Body Piston Valves

These rugged valves are designed for water and high-pressure steam applications with pipe sizes 2 1/2 inch or smaller and up to 150 psi. They accommodate rapid cycling, eliminate water hammer, and create tight shutoff in both directions. Apply them in batch washers, heavy-duty washers, dry cleaning, as well as on the recycling skid.

ASCO Steam/Hot Water Valves

Get up to 60% higher flow, while increasing throughput when you specify these popular high-flow, long-life models. They reduce inventories by accommodating both steam and hot water service, and are designed for quick, easy maintenance. Apply them with confidence especially in heavy-duty washers, and ironing equipment.

ASCO Solenoid Pilot Valves

These robust valves are designed to meet the high cycling demands of today's commercial and industrial laundries. Couple them with spring-return and double-acting cylinders for use in applications such as heavy-duty washing, pressing, ironing, and folding.

ASCO Gas Valves

Choose from the industry's broadest line of solenoid and electrohydraulic gas shutoff valves. Leading OEMs specify these for the control of fuel gas in main and pilot gas train applications on all brands of drying equipment. Some models provide extremely high flows, allowing economical downsizing of the fuel train.

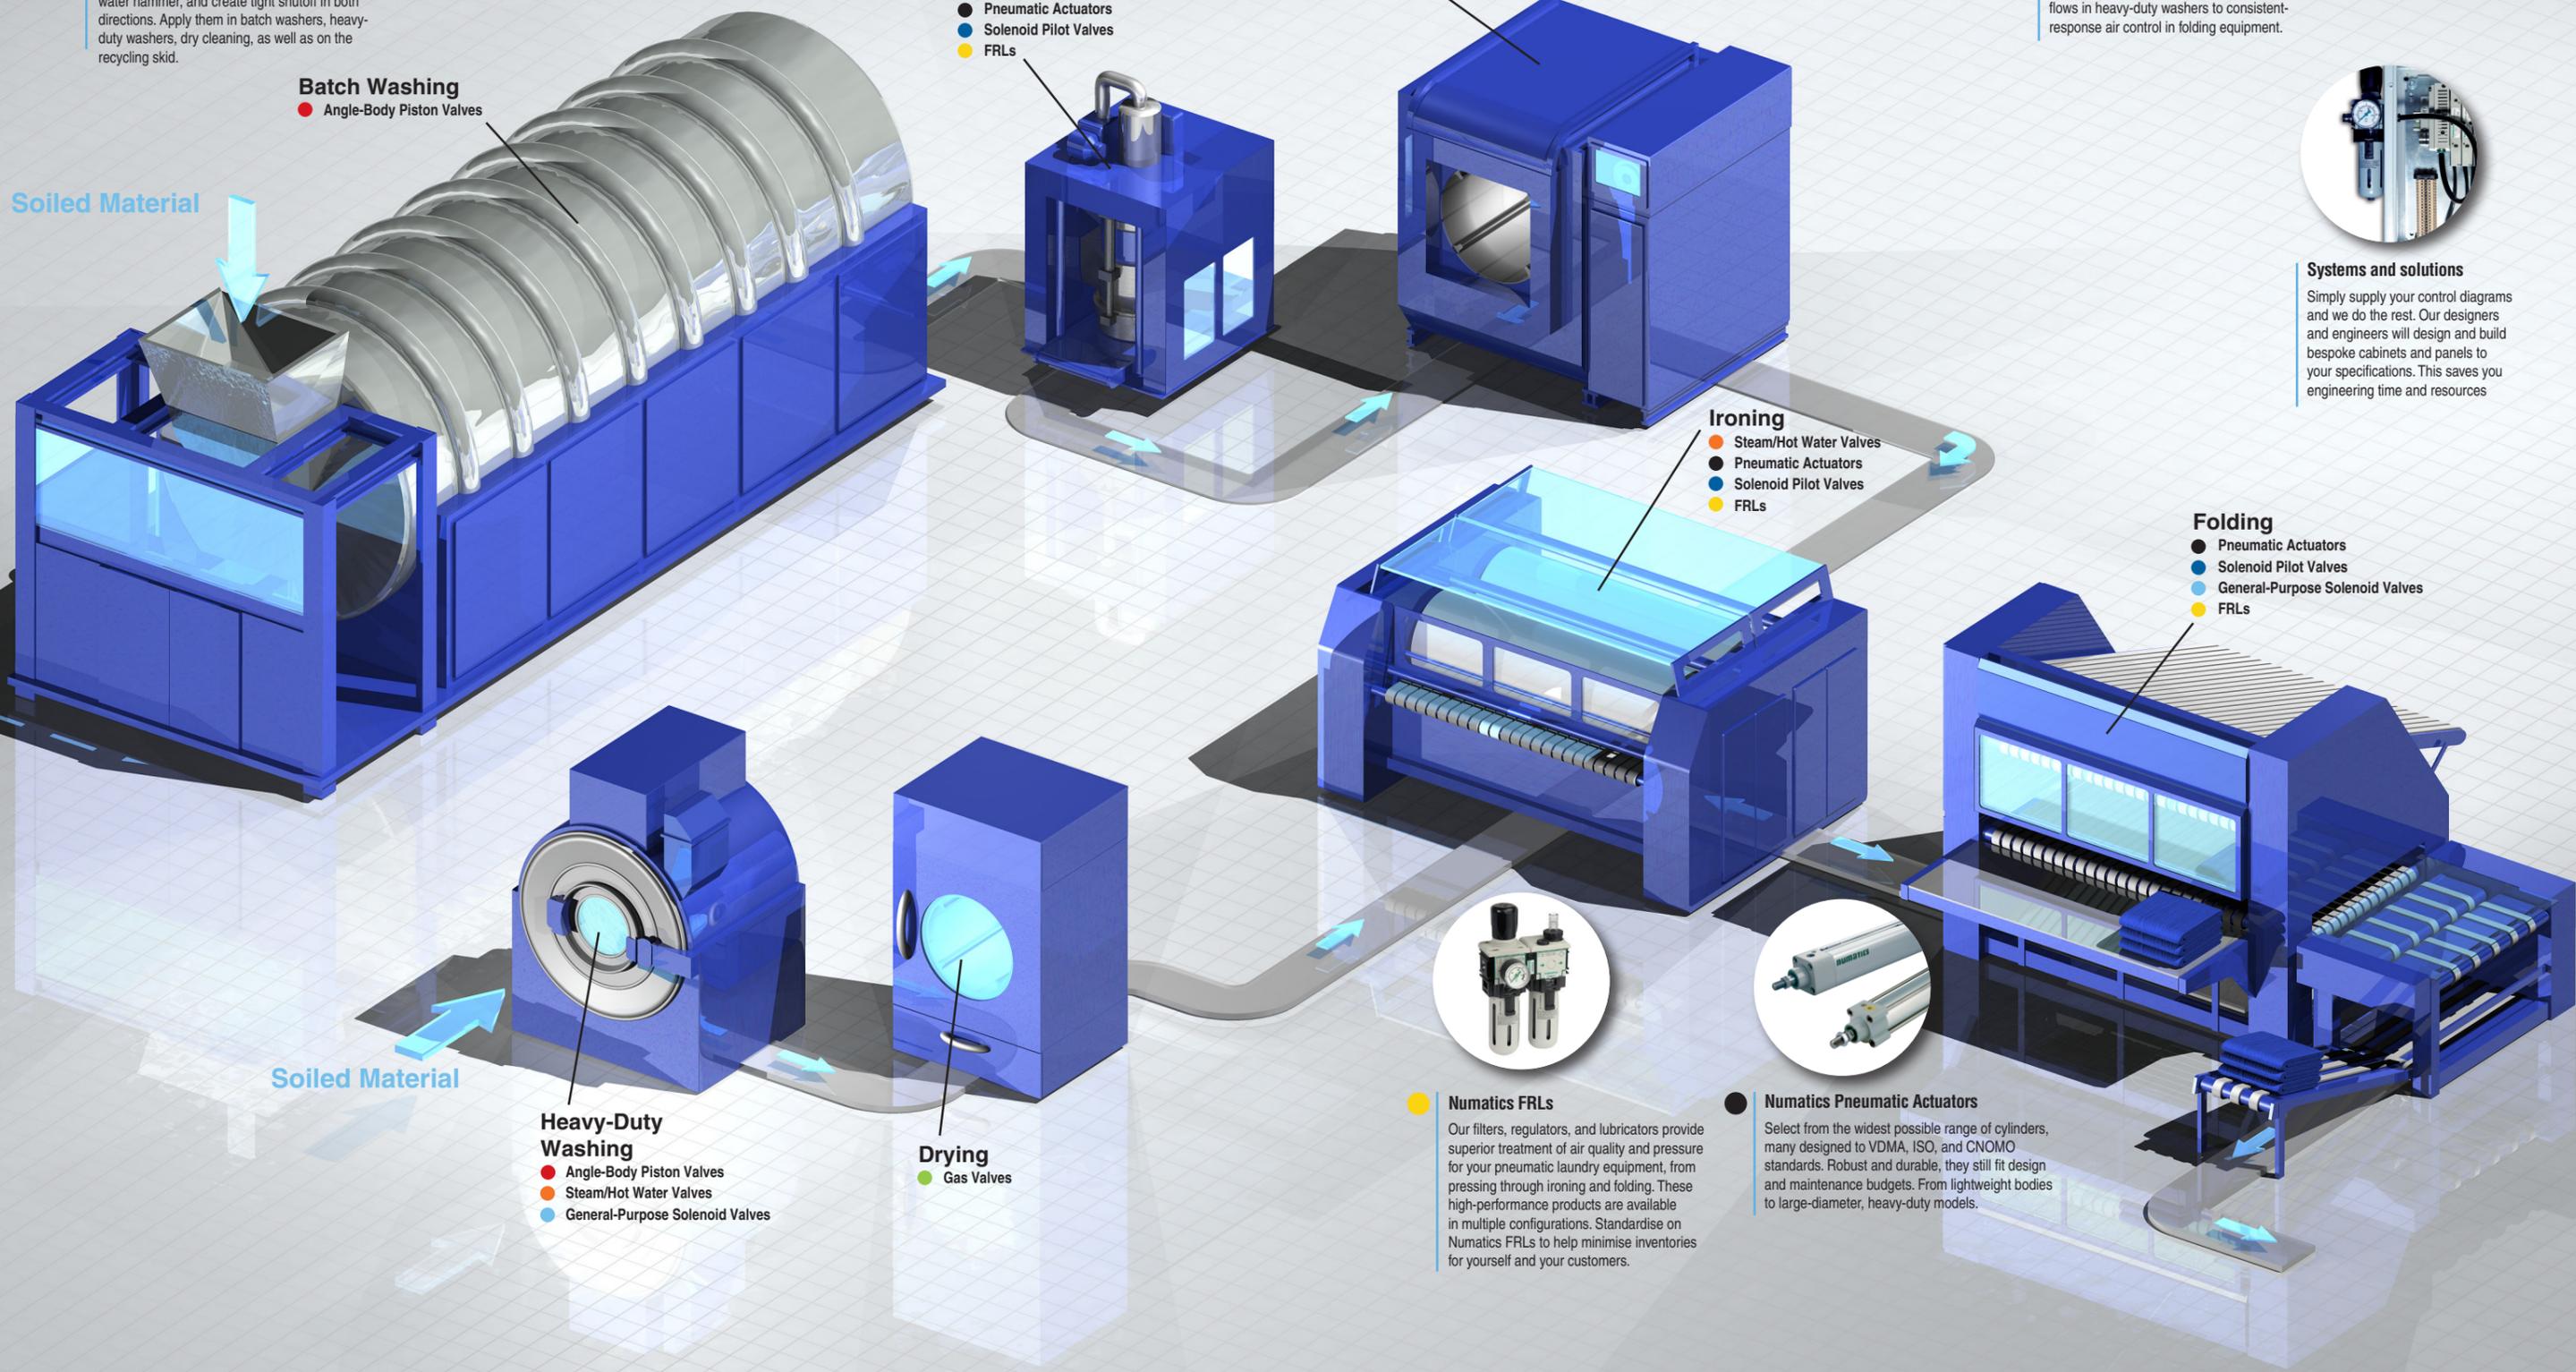

ASCO General Purpose Solenoid Valves

ASCO Numatics offers the widest range of solenoid valves on the market. Our proven, dependable models are ideal for air or liquid flow. Our high flows provide your customers with more cycles and greater throughput. Applications range from cold and hot water handling of inlet flows in heavy-duty washers to consistent-response air control in folding equipment.

Systems and solutions

Simply supply your control diagrams and we do the rest. Our designers and engineers will design and build bespoke cabinets and panels to your specifications. This saves you engineering time and resources

Choose ASCO Numatics as your single source of fluid automation solutions for laundry equipment designs. Performance, dependability, and low cost of ownership characterise our wide range of superior products.

Presenting ASCO Numatics solutions

The clean winner for laundry

ASCO Numatics valves and other products are fast becoming the choice of leading original equipment manufacturers (OEMs) for cold and hot water, steam, air, and fuel gas handling in commercial and industrial laundry equipment.

Our winning solutions help machine designers improve their competitive advantage. Now OEMs can offer their customers optimised outputs, increased throughputs, and reduced downtimes. Features such as high water flow rates help washers fill faster. Greater gas flows provide higher heat output for faster drying and cycling. Commercial and industrial laundries can improve productivity, save energy, and provide higher quality service to their customers.

Apply everywhere

Our products can be used in practically any part of the laundry operation. Laundry equipment leaders specify ASCO Numatics for applications at numerous stages of the process, including:

- Washing
- Pressing
- Drying
- Separating
- Ironing
- Folding

There are literally hundreds of ways that your designs can take advantage of ASCO Numatics performance and reliability. Don't hesitate to ask for what you need.

ASCO Numatics advantages

Reliability and long life. ASCO Numatics products emphasise durable build quality and robust components for greatly extended life cycles. So your customers can cut maintenance costs and maximise their uptimes.

High flow and high pressure. Specify ASCO Numatics for your most challenging applications. Where appropriate, our products are rated for the higher water or gas flows and the higher steam flows and pressures your customers demand. They get faster fills and hotter drying for reduced cycle times and greater throughput.

Consistent response. Our products are precisely designed and machined for rapid, repeatable operation. For example, the fast, dependable response times of our solenoid valves are critical for accurate, crisp, consistent folding of ironed items.

Low cost of ownership. ASCO Numatics products install more easily, run longer, and require less maintenance. These advantages translate into less trouble for you — and considerable savings for your customers.

Compact design. Our offerings feature smaller footprints and low profiles. Their minimal size allows you plenty of room for other components in tight equipment spaces.

Minimised inventory. Whenever possible, we design our products for multipurpose use. For instance, our steam valves perform superbly on both water and steam. This lets you standardise on specifying fewer but better products, while allowing your customers to stock fewer spare parts.

Swift serviceability. Should our products require maintenance, they're designed to make it fast and easy. Also, with the largest presence of any fluid automation supplier, ASCO Numatics can deliver consistent local service, parts replacement, and technical support anywhere in the world.

Ensured availability. ASCO Numatics is a comprehensive solutions provider with the broadest product line in our business. Our global distribution network ensures that nobody offers faster delivery or replacement.
